DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 14-19 are rejected under 35 U.S.C. 112, first paragraph, because the specification does not reasonably provide enablement for the agents listed in claim 14 or the treatment of wrinkles. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention commensurate in scope with these claims.

The nature of the invention:

The claims are directed to treatment of wrinkles or fine lines with at least one compound of formula (I).

The state of the prior art and the predictability or lack thereof in the art:

The prior art of record does not appear to disclose use of the claimed compounds to treat wrinkles or fine lines or the compounds listed in claim 14.

The amount of direction or guidance present and the presence or absence of working examples:

It appears that only one compound is tested for relaxation of diaphragm muscle. There is no example that shows that the compounds are effective in treating wrinkles and fine lines. Also there does not appear to be examples of the agents falling within the scope of the broad categories of claim 14.

Art Unit: 1616

The breadth of the claims and the quantity of experimentation needed:

The claims are broad in that they claim numerous compounds and no specified amount for treatment of fine lines and wrinkles. As such, it appears that one of ordinary skill in the art would be required to do undue experimentation in order to show that the compounds would be effective in treating fine lines and wrinkles and what compounds would fall within the scope of the broad categories of claim 14. Further, there is no evidence of any agent that would completely prevent degradation of dermal or epidermal macromolecules, as such, one of ordinary skill in the art would be required to do undue experimentation in order to determine what compounds prevented degradation of the same.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-19 rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 1-19 indicate that "wherein when m is not zero, the groups R_1 may be identical or different" which renders the claims indefinite as it is uncertain how $m=1$ can have groups R_1 that are identical or different.
